Mapping buried utilities

Mapping buried utilities has been a longstanding practice in the industry. Access to reliable maps plays a crucial role in safety & risk mitigation, preventative maintenance and emergency repairs.

There are numerous challenges associated with mapping buried utilities:

- Carrying out the job often requires specialized, costly equipment.
- Mapping utilities needs to be done by a highly skilled team carrying out extensive fieldwork.
- Systems are not set up to seamlessly transfer locate data onto a map and create comprehensive, detailed reports.

As a result, buried utilities frequently lack documentation, leaving their exact location uncertain.

In an increasingly digital world, demand for high quality, reliable, digital maps of buried utilities is quickly becoming the norm.

Reliable maps play a crucial role in enhancing operational efficiency, preventive maintenance, and emergency repairs of utilities

Locate and map buried utilities in a single operation

Map while you locate

- ◆ Combine buried utility locating with accurate mapping in a single operation
- ◆ Survey grade accuracy
- ◆ View and build your map on your mobile phone

Flexibility to work with the system that works for your business

- ◆ Industry standard file formats to use with your mapping software
- ◆ Choose your preferred mobile app and correction service provider
- ◆ Directly export the data from the locator

Mapping experts. Integrate utility locating into your mapping procedures.

- ◆ Walk the line once
- ◆ Simultaneously map and locate utilities, without compromising on quality
- ◆ Locate as accurately as possible, map as accurately as possible

Locate experts. Integrate mapping into your utility locate procedures.

- ◆ Build a comprehensive inventory of large, buried infrastructure networks
- ◆ Minimal additional training for utility operators
- ◆ No separate resources required for utility mapping

Make the RD8200SG work for you

- ◆ View and build your map as you go along using a mobile app
- ◆ Flexible solution, can work with any correction service provider and mapping solution
- ◆ Works where cellular data and correction service are available

Designed for continuous use in the field

- ◆ Integrated GNSS antenna, fewer parts and components
- ◆ Automatic antenna offset avoids tilting back
- ◆ Bubble for optimum precision

Ergonomic design, premium quality

- ◆ Lightweight and ergonomic
- ◆ Rugged design to cope with real world conditions such as rain, dirt and extreme temperatures
- ◆ Designed and built in the United Kingdom

Survey grade accuracy

Minimal additional training

High quality, reliable,
digital maps
