

# NEW – Radiodetection Backpack and Transmitter Bag

A convenient new way to transport a precision cable & pipe locator system

## Backpack:

The new durable and weather-resistant Backpack is designed to be comfortable to wear for long periods. It features a number of elements that users will find useful and convenient, including:

- Padded straps and foam back covered in Airmesh, for increased user comfort
- High visibility colouring and reflective strips, for extra safety when working at night
- External sleeve to hold a precision locator easily and securely
- Spacious interior for carrying a transmitter and other items such as accessory clamps or spare batteries
- Multiple pockets for spray paint cans, hand tools, earth stake etc.

## Transmitter bag:

The new Tx bag holds a transmitter without its tool tray, and has dual external pockets for items like your Direct Connect leads, earth lead and Tx-Magnet. The flap on the top offers easy access to the Tx controls and accessory socket, while the wide, adjustable shoulder strap provides a comfortable way of carrying the bag when it is not in the Backpack.
