Preface

About this guide

CAUTION: This guide provides basic operating instructions for the RD7100 locator and transmitter. It also contains important safety information and guidelines and as such should be read in its entirety before attempting to operate the RD7100 locator and transmitter.

This guide is intended as a quick reference guide only. For detailed instructions, including the use of accessories, help with eCert™, CALSafe™, Survey measurements and Usage-Logging* please refer to the RD7100 Cable, Pipe and RF Marker locator operation, SurveyCERT+™ and RD Manager™ manuals, which are available for download from www.radiodetection.com.

Certificates of conformity for the RD7100 locators and Tx transmitter ranges can be found at www.radiodetection.com.

*Logging models only.

WARNING! Direct connection to live conductors is POTENTIALLY LETHAL. Direct connections to live conductors should be attempted by fully qualified personnel only using the relevant products that allow connections to energized lines.

WARNING! The transmitter is capable of outputting potentially lethal voltages. Take care when applying signals to any pipe or cable and be sure to notify other technicians who may be working on the line.

WARNING! Reduce audio level before using headphones to avoid damaging your hearing.

WARNING! This equipment is NOT approved for use in areas where hazardous gases may be present.

WARNING! When using the transmitter, switch off the unit and disconnect cables before removing the battery pack.

WARNING! The RD7100 locator will detect most buried conductors but there are some objects that do not radiate any detectable signal. The RD7100, or any other electromagnetic locator, cannot detect these objects so proceed with caution. There are also some live cables which the RD7100 will not be able to detect in Power mode. The RD7100 does not indicate whether a signal is from a single cable or from several in close proximity.
### 3 Year Extended Warranty

RD7100 locators and transmitters are covered by a 1 year warranty as standard. Customers can extend their warranty period to a total of 3 years by registering their products within 3 months of purchase.

**There are 2 ways to register your product:**

1. **Radiodetection portal**
   - Visit [https://portal.radiodetection.com](https://portal.radiodetection.com) to create your portal account* and use the Product page to register your locator or transmitter.
   - Visit [https://support.radiodetection.com](https://support.radiodetection.com) for instructions on how to create a portal account or register your product.
   - *A valid email address and mobile number are required.

2. **Windows Applications**
   - RD Manager™ available from [www.radiodetection.com/RDManager](http://www.radiodetection.com/RDManager).

From time to time Radiodetection may release new software to improve the performance or add new functionality to its products. By registering, users will benefit from email alerts advising about new software and special offers related to its product range.

Users can opt-out at any time from receiving software and technical notifications, or just from receiving marketing material by contacting Radiodetection.

---

### eCert and Self-Test

The RD7100 locator is safety equipment which should be regularly checked to ensure its correct operation.

**eCert** provides a thorough test of the RD7100’s locating circuitry, and supplies a Radiodetection Calibration Certificate when a positive test result is obtained.

To run an eCert, the locator should be connected to an internet-enabled PC on which the RD Manager software is installed.

Refer to the RD Manager operation manual for further details. Additional purchase may be required.

RD7100 locators incorporate an Enhanced Self-Test feature. In addition to the typical checks for display and power functions, the RD7100 locator applies test signals to its locating circuitry during a Self-Test to check accuracy and performance.

We recommend that a self-test is run at least weekly, or before each use.
Locator features

2. LCD with auto backlight.
3. Speaker.
4. Battery and USB connector (inside the battery compartment)
5. Optional alkaline battery pack.
6. Accessory connector.
8. Battery charging connector (Li-Ion pack)
9. Marker loop antenna.

Locator keypad

11. Frequency key.
12. Up and down arrows.
   With antenna folded up, toggles different modes. With antenna folded down, toggles marker and combined (marker/line) modes.
14. Survey Key
15. Transmitter key: Not used.

Locator screen icons

17. Signal strength bargraph with peak marker.
18. Null/Proportional Guidance arrows.
20. Sensitivity readout
22. Fault-Find arrows (PLM and TLM models only).
23. Radio Mode icon.
24. Power Mode icon.
25. Accessory/Measurement icon.
27. Frequency/marker type/current/menu readout.
28. Compass: Compass/Marker mode indicator: Shows the direction of the located cable relative to the locator. Also used as a graphical indication for Marker mode active.
29. Antenna modes icon:
   Indicates antenna mode selection: Peak/Peak+/Null/Guidance.
30. Sonde icon: Indicates that a sonde signal source is selected.
31. Line icon: Indicates that a line signal source is selected.
32. Depth readout.
33. Bluetooth status icon:
   Flashing icon means pairing is in progress. Solid icon indicates a connection is active.
Tx-1, Tx-5 and Tx-10 transmitters

Transmitter features
2. LCD.
3. Removable accessory tray.
4. D-cell battery tray.
5. Optional Lithium-Ion battery pack.

Transmitter keypad
6. Power key.
7. Frequency key.
8. Up and down arrows.
9. Measure key.

Transmitter screen icons
10. Battery level indicator.
11. Operation mode readout.
12. Standby icon.
13. Output level indicator.
14. Clamp icon: Indicates when a signal clamp or other accessory is connected.
15. DC Power connected indicator.
16. Induction mode indicator.
17. A-Frame: Indicates when the transmitter is in Fault-Find Mode.
18. Voltage warning indicator: Indicates that the transmitter is outputting potentially hazardous voltage levels.
19. Volume level indicator.
Keypad actions and shortcuts

Switch the locator or transmitter on by pressing the key. Once powered up, the keys function as follows:

Locator keys

<table>
<thead>
<tr>
<th>KEY</th>
<th>SHORT PRESS</th>
<th>LONG PRESS</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Enter the menu.</td>
<td>Switch power off.</td>
</tr>
<tr>

<td>Take voltage and impedance measurements at a standardized frequency.</td>
</tr>
<tr>
<td></td>
<td>Adjusts the output signal.</td>
<td>Select standby / maximum standard power</td>
</tr>
</tbody>
</table>

Tip: to scroll through frequencies from high to low, hold while pressing the button (applies to both locators and transmitters).

Before you begin

IMPORTANT!
This guide is intended to be a quick reference guide. We recommend you read the full operation manual before you attempt to operate the RD7100 locator.

First use

The RD7100 cable, pipe and RF marker locator is powered by a Lithium-Ion battery pack, which needs to be connected before the first use:
To connect the Li-Ion battery pack open the RD7100 battery compartment and plug the battery lead into the battery connector.

To fit the D cell batteries in the transmitter, unlatch the accessory tray. The battery compartment is located underneath the transmitter body. Use the turnkey to unlatch the battery compartment. Insert eight D-Cell Alkaline or NiMH batteries, taking care to align the positive (+) and negative (-) terminals as indicated.

Alternatively, you can power the transmitter from a mains or vehicle power source using a Radiodetection supplied optional accessory adapter.

Transmitter Rechargeable battery pack

A Transmitter Lithium-Ion battery pack is available, providing superior performance over traditional alkaline batteries. To fit this, follow the instructions provided with the pack.

Checking your system software version

If you wish to check which version of software is running on your locator, press and hold the key when switching the locator on. This information may be asked for when contacting Radiodetection or your local representative for technical support.

Transmitters automatically show their software version on startup.

System setup

It is important that you set up the system according to regional / operational requirements and your personal preferences before you conduct your first survey. You can set the system up using the menus as described below.

Setting up your system

The RD7100 locator and transmitter menus allow you to select or change system options. Once entered, the menu is navigated using the arrow keys. Navigation is consistent on both the transmitter and the locator. When in the menu, most on-screen icons will temporarily disappear and the menu options will appear in the bottom left-hand corner of the display.

The right arrow enters a submenu and the left arrow returns to the previous menu.

Note that when browsing the locator menu, the and keys act as left and right arrows. When browsing the transmitter menu, the and keys act as left and right arrows.
To navigate menus:
1. Press the 🔽 key to enter the menu.
2. Use the ▲ or ▼ keys to scroll through the menu options.
3. Press the ▼ key to enter the option’s submenu.
4. Use the ▲ or ▼ keys to scroll through the submenu options.
5. Press the ▼ key to confirm a selection and return to the previous menu.
6. Press the 🔽 key to return to the main operation screen.

NOTE: When you select an option and press the ▼ key, the option will be enabled automatically.

Locator menu options
• VOL: Adjust the speaker volume from 0 (mute) to 3 (loudest).
• UNITS: Select metric or imperial units.
• INFO: Run a Self-Test, display the date of the most recent service recalibration (M CAL) or the most recent eCert calibration.
• MARKR: Enable or disable individual utility markers.
• LANG: Select menu language.
• POWER: Select local power network frequency: 50 or 60Hz.
• ANT: Enable or disable any antenna mode with the exception of Peak.
• FREQ: Enable or disable individual frequencies.
• ALERT: Enable or disable StrikeAlert™.
• BATT: Set battery type: Alkaline or NiMH. Li-Ion auto-selects when connected.
• ARROW: Select Null or proportional Guidance arrows in Peak+ mode.
• COMP: Enable or disable display of the Compass feature.

Transmitter menu options
• VOL: Adjust the speaker volume from 0 (mute) to 3 (loudest).
• FREQ: Enable or disable individual frequencies.
• BOOST: Boost transmitter output for a specified period of time (in minutes).
• LANG: Select menu language.
• OPT F: Run SideStep auto™ to auto-select a locate frequency for the connected utility.
• BATT: Set battery type: ALK, NiMH or Li-Ion and enable / disable Eco mode.
• MAX P: Set the transmitter to output its maximum wattage.
• MODEL: Match the transmitter setting to the model of your locator.
• MAX V: Set the output voltage to maximum (90V).

Examples of using the menu, selecting options and making changes:

Locator mains power frequency
To select the correct frequency (50 or 60Hz) for your country or region’s power supply:
1. Press the 🔽 key to enter the menu.
2. Scroll to the POWER menu using the ▲ or ▼ keys.
3. Press the ▼ key to enter the POWER menu.
4. Use the ▲ or ▼ keys to select the correct mains frequency.
5. Press the ▼ key twice to accept your selection and return to the main operation screen.

Batteries
It is important to set the system to match the currently installed battery type to ensure optimal performance and correct battery level indication.
To set your battery type:
1. Press the 🔽 key to enter the menu.
2. Scroll to the BATT menu using the ▲ or ▼ arrows.
3. Press the ▼ key (locator) or the ▼ key (transmitter) to enter the BATT menu.
4. Scroll up or down to select the correct battery type (Alkaline, Nickel-metal Hydride or Lithium-Ion). Lithium-Ion is automatically selected when a Li-Ion pack is connected to a locator.
5. Press the ⌁ key twice to accept your selection and return to the main operation screen.

Transmitter Eco Mode
When using alkaline batteries, Eco mode can be selected to maximize run time. When Eco mode is selected the transmitter automatically reduces its maximum power output as battery levels run low. Eco mode is switched off by default. To Enable Eco Mode:
1. Press the 🔽 key to enter the menu.
2. Scroll to the BATT menu using the ▲ or ▼ arrows.
3. Press the ▼ key (locator) or the ▼ key (transmitter) to enter the BATT menu.
4. Scroll up or down to select the correct battery type (Alkaline, Nickel-metal Hydride or Lithium-Ion). Lithium-Ion is automatically selected when a Li-Ion pack is connected to a locator.
5. Press the ⌁ key twice to accept your selection and return to the main operation screen.
Locating pipes and cables

For more detailed descriptions of using the locator and transmitter, and for detailed locate techniques, refer to the Operation Manual.

The RD7100 locator is designed to operate with the ‘blade’ of the locator perpendicular to the path of the cable or pipe being located.

Running a Self-Test

We recommend that a Self-Test is run at least weekly, or before each use. As the Self-Test tests the integrity of the locate circuity, it is important that it is carried out away from larger metallic object such as vehicles, or strong electrical signals. To run a Self-Test:

1. Press the \( \text{key} \) to enter the menu.
2. Scroll to the INFO menu using the \( \text{or \arrow} \) arrows.
3. Press the \( \text{key} \) to enter the INFO menu.
4. Select TEST using the \( \text{or \arrow} \) arrows.
5. Press the \( \text{key} \) to select YES
6. Press the \( \text{key} \) to begin the Self-Test
7. Once the Self-Test is completed, the result (PASS or FAIL) will be displayed.
8. Restart the locator using the \( \text{key} \)

SideStepauto™

The transmitter can be used to recommend a general-purpose locate frequency for the intended locate task by measuring the impedance of the target cable or pipe. To run SideStepauto™, connect the transmitter to the target utility, then:

1. Press the \( \text{key} \) to enter the menu.
2. Scroll to the OPT F menu using the \( \text{or \arrow} \) arrows.
3. Press the \( \text{key} \) to select ‘START.
4. Press the \( \text{key} \) to start the test. The transmitter will automatically select a general purpose frequency for use on the connected utility.

Locating with Active Frequencies

Active frequencies are applied to the target pipe or cable using the transmitter, and provide the most effective way of tracing buried pipes or cables.

Generally speaking, it is better to use a low frequency on larger, low impedance utilities, and move to a higher frequency on smaller, high impedance utilities.

The lowest power setting required to trace the target utility should always be used to minimize the risk of false trails.

The transmitter can apply a signal using three different methods:

Direct connection

In direct connection, you connect the transmitter directly to the pipe or cable you wish to survey using the red Direct Connect lead supplied. The black lead is generally connected to earth using the supplied ground stake.

The transmitter will then apply a discrete signal to the line, which you can trace using the locator. This method provides the best signal on an individual line and enables the use of lower frequencies, which can be traced for longer distances.

\( \text{WARNING! Direct connection to live conductors is POTENTIALLY LETHAL. Direct connections to live conductors should be attempted by fully qualified personnel only using the relevant products that allow connections to energized lines.} \)

Induction

The transmitter is placed on the ground over or near the survey area. You select the appropriate frequency. The transmitter will then induce the signal indiscriminately to any nearby metallic conductor. In induction mode, using higher frequencies is generally recommended as they are induced more easily onto nearby conductors.

Transmitter Clamp

An optional signal clamp can be placed around an insulated live wire or pipe up to 8.5” / 215mm in diameter to transfer the transmitter signal to the utility. This method of applying the transmitter signal is particularly useful on insulated live wires and removes the need to disconnect the supply to the cable.

\( \text{WARNING! Do not clamp around uninsulated live conductors.} \)

\( \text{WARNING! Before applying or removing the clamp around a power cable ensure that the clamp is connected to the transmitter at all times.} \)
Locating with Passive Frequencies

Passive frequency detection takes advantage of signals that are already present on buried metallic conductors. The RD7100 supports up to three types of passive frequencies: Power, Radio and CPS* signals. You can detect these frequencies without the aid of the transmitter.

*Model specific.

Power Filters

The RD7100 PL locator allows operators to take advantage of the harmonic signals found on power networks. Once in Power Mode, press the key to switch out of Radiodetection’s sensitive Power Mode and scroll through five individual Power Filters. This enables operators to establish if a single large power signal comes from one source or from the presence of multiple cables. The different harmonic characteristics of the detected lines can then be used to trace and mark their route.

Additionally the use of an individual harmonic can allow you to locate power lines in situations where the total signal would otherwise be too large.

Locate Modes

Dependent on the model selected, the RD7100 offers a choice of up to 4 locate modes, each of which is designed for specific uses, depending on what task is being carried out.

To scroll between locate modes, press the key.

PEAK: For accurate locating, the peak bargraph provides a visual readout of the signal strength. The peak signal is found directly over the buried utility.

PEAK+: Choose to combine the accuracy of the Peak bargraph with Null arrows, which can indicate the presence of distortion, or with proportional Guidance arrows for rapid line tracing – switch between them by holding the key.

GUIDANCE: Proportional arrows and a ballistic ‘needle’ combine with audio left / right indication for rapidly tracing the general path of a buried utility.

NULL: Provides a quick left / right indication of the path of a utility. As Null is susceptible to interference, it is best used in areas where no other utilities are present.

Locating RF Markers

The RD7100 locator enables users to locate most common RF utility markers. These are also referred to as Electronic Marker System (EMS) and Omni markers.

To enable marker locate mode lower the marker loop antenna. To disable the marker locate mode fold the loop antenna up.

Marker types

The RD7100 can detect 9 different RF Markers, as shown in the table below.

<table>
<thead>
<tr>
<th>UTILITY</th>
<th>COLOR</th>
<th>DISPLAY ABBREVIATION</th>
<th>FREQUENCY</th>
</tr>
</thead>
<tbody>
<tr>
<td>French Power</td>
<td>Natural</td>
<td>PFR</td>
<td>40.0kHz</td>
</tr>
<tr>
<td>General / Non-drinkable water</td>
<td>Purple</td>
<td>PUR</td>
<td>66.35kHz</td>
</tr>
<tr>
<td>Cable TV</td>
<td>Black/Orange</td>
<td>CTV</td>
<td>77.0kHz</td>
</tr>
<tr>
<td>Gas</td>
<td>Yellow</td>
<td>GAS</td>
<td>83.0kHz</td>
</tr>
<tr>
<td>Telephone/Telecoms</td>
<td>Orange</td>
<td>TEL</td>
<td>101.4kHz</td>
</tr>
<tr>
<td>Sanitary</td>
<td>Green</td>
<td>SAN</td>
<td>121.6kHz</td>
</tr>
<tr>

<td>Water</td>
<td>Blue</td>
<td>H20</td>
<td>145.7kHz</td>
</tr>
<tr>
<td>Electrical Power*</td>
<td>Red</td>
<td>PWR</td>
<td>169.8kHz</td>
</tr>
</tbody>
</table>

*Use of the red Electrical Power (PWR) marker locate mode is subject to radio licensing restrictions for Short Range Devices in the EU and possibly other countries. It is the responsibility of the user to ensure that the red Power (PWR) marker locate mode is only enabled in countries where radio licensing restrictions do not apply at the operating frequency of 169kHz.

If required and permitted use RD Manager to enable this frequency.

Depth, current and compass readouts

WARNING! Never use the depth measurement readout as a guide for mechanical or other digging activity. Always follow safe digging guidelines.

The RD7100 locator can measure and display the utility depth, locate signal current and the relative orientation of the cable or pipe to the locator. This helps you to make sure that you are following the right cable or pipe, especially when other utilities are present.

The RD7100 locator features TruDepth™, a feature that helps you to ensure the accuracy of your locates. The depth and current are automatically removed from the display when the locator is at an angle of more than 7.5° from the path of the cable or pipe being located, or when the locator determines that signal conditions are too poor for reliable measurements.
Using accessories

The locator and transmitter are compatible with a wide range of accessories. For detailed information on using any of the accessories below please refer to the RD7100 locator operation manual.

Transmitter signal clamps

When it is not possible to connect directly onto a pipe or cable, or induction mode is unsuitable, a transmitter signal clamp may be used. The clamp is plugged into the output of the transmitter and provides a means of applying a locate signal to an insulated live wire. This is particularly useful with live insulated cables as it removes the need to disable the power and break the line.

⚠️ WARNING! Do not clamp around uninsulated live conductors.

⚠️ WARNING! Before applying or removing the clamp around a power cable ensure that the clamp is connected to the transmitter at all times.

To locate or identify individual lines a locator signal clamp can be connected to the accessory socket of the locator and can be clamped around individual pipes or cables.

Stethoscopes and locator signal clamps

Locator clamps can be used to identify a target cable or pipe amongst a number of different cables by checking for the strongest locate signal. When cables are bunched or tightly packed, a stethoscope antenna can be used in place of a clamp.

To use a stethoscope or locator signal clamp, connect it to the locator’s accessory socket. The locator will automatically detect the device and filter out location modes that are irrelevant.

Sondes, Flexrods and FlexiTrace

Sondes are battery powered transmitters that are useful for tracing non-metallic pipes. They can be fixed to Flexrods to allow them to be pushed through pipes or conduits, and some are suitable for blowing through ductwork. Some models of the RD7100 can detect a range of sonde frequencies, including those transmitted by flexiprobe™ P540c pushrod systems and flexitrax™ P550c crawler systems.

For a detailed guide on locating sondes, please refer to the operation manual.

A FlexiTrace is a traceable fiberglass rod incorporating wire conductors with a sonde at the end. It is connected to the output of the transmitter and is typically used in small diameter, non-metallic pipes. The user has the option of locating the entire length of the cable or choosing to locate only the tip of the cable.

The FlexiTrace has a maximum power rating of 1W. When using the FlexiTrace with a Radiodetection Tx-5 or Tx-10 transmitter, the output limit must be set to 1W in the MAX P menu and the output voltage limit set to LOW in the MAX V menu.

No additional settings are required for the Tx-1 transmitter.

Fault-finding with an A-Frame

The RD7100 PLM and TLM models have the ability to detect cable or pipe insulation faults accurately using an A-Frame accessory. The Tx-5 and Tx-10 transmitters provide fault finding signals that can be detected by the A-Frame as a result of the signal bleeding to ground through damaged cable sheaths.

The Transmitter’s multimeter function can be used to measure the impedance of the connected pipe or cable in order to characterize the fault.

For a detailed guide to fault-finding, please refer to the operation manual.

Plug / Live cable connector

The plug connector is connected to the output of the transmitter and is used to put a signal onto a line and trace it from a domestic mains plug to the service cable in the street.

The live cable connector can be used to apply a signal to a live cable. Only suitably qualified personnel should use this equipment.

Submersible antenna

This antenna is connected to the locator and used to locate pipes and cables underwater at depths of up to 300 feet / 100 meters.

⚠️ WARNING: use of the submersible antenna should be by fully licensed and experienced personnel only, and only after fully reading the operation manual!

RD Manager PC Software

RD Manager is the RD7100 locator system PC companion, and it allows you to manage and customize your locator. RD Manager is also used to retrieve and analyze survey and usage data (PLM and TLM only), run an eCert calibration, and to perform software upgrades.

You can use RD Manager to register your products to obtain an extended warranty, setup your locator by performing a number of maintenance tasks such as adjusting date and time, activating and de-activating active frequencies or RF Markers, or by setting-up functions like CALSafe or StrikeAlert.

RD Manager is compatible with PCs running Microsoft Windows 64 bit operating system.

To download RD Manager, go to www.radiodetection.com/RDManager.

If you do not have internet access, or wish to receive RD manager on a CD-ROM, contact your local Radiodetection office or representative.

For more information about RD Manager refer to the RD Manager operation manual.
Bluetooth wireless connections

RD7100 locators feature a Bluetooth wireless module, as standard, providing the ability to connect to compatible devices such as Android devices, PCs, laptops or handheld devices running a compatible application.

NOTE: The RD7100 locator wireless features may be subject to national and or local regulations. Please consult your local authorities for more information.

⚠️ WARNING! Do not attempt any wireless connection in areas where such technology is considered hazardous. This may include: petrochemical facilities, medical facilities or around navigation equipment

Switching Bluetooth on

By default RD7100 locators are shipped with the Bluetooth wireless connection module disabled.

1. Press the key to enter the menu.
2. Scroll to the BT menu using the or keys.
3. Press the key (locator) or the key (transmitter) to enter the BT menu.
4. Scroll up or down to the ON option.
5. Press the key to switch Bluetooth ON and return to the previous menu.

You can switch Bluetooth off to conserve battery life, or to comply with regulations in areas where wireless communications are considered hazardous. To do this, follow the above process, selecting ‘OFF’ in the BT menus.

Pairing to an Android device, PDA or Windows PC

Connection requirements:

• Any RD7100 locator.
• A compatible Bluetooth-enabled Android device, PDA or Bluetooth enabled PC or Laptop.

NOTE: The procedure below describes the pairing process between a RD7100 locator and a PDA. Pairing to an Android device or Windows PC follows the same steps for the RD7100 locator. Consult your Android device or Windows PC Bluetooth pairing instructions to pair with the RD7100 locator.

Pair the RD7100 locator to your PDA using your PDA’s Bluetooth software.

NOTE: The procedure for pairing your PDA may differ depending on the PDA make and model. The following procedure should apply to most PDAs.

On the locator:

1. Press the key to enter the menu.
2. Scroll to the BT menu using the or keys.
3. Press the key to enter the BT menu.
4. Scroll up or down to the PAIR menu.
5. Press the key to enter the PAIR menu.
6. Scroll up or down to the BT-PC option.
7. Press the key and the locator will attempt to pair with your PDA.

On your PDA:

8. From the PDA’s Start menu, select Settings then select the Connections Tab followed by the Bluetooth icon.
9. Ensure the Bluetooth radio is switched on and make the PDA visible to other devices.
10. Select the Devices tab and scan for new partnerships.
11. Create a partnership with the RD7100_XXXX device.
12. If asked for a passkey, enter 1234.
13. Refer to the SurveyCert manual for advanced settings if required by your PDA.

Resetting connections

If you experience problems with the RD7100 Bluetooth features, Radiodetection recommends resetting the connection and then pairing your device again:

1. Press the key to enter the menu.
2. Scroll to the BT menu using the or keys.
3. Press the key to enter the BT menu.
4. Scroll up or down to the RESET menu.
5. Press the key and the locator will purge all current connections.
6. Re-pair your devices.
Bluetooth error codes

If an error occurs when attempting to perform any Bluetooth command using the locator to the transmitter or the locator to a paired device, the LCD will display a code to help you resolve the problem on the locator.

The codes are as follows:

<table>
<thead>
<tr>
<th>BT CODE</th>
<th>DESCRIPTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>BT001</td>
<td>Bluetooth not configured for this unit</td>
</tr>
<tr>
<td>BT002</td>
<td>Internal Bluetooth error</td>
</tr>
<tr>
<td>BT003</td>
<td>Locator not paired with transmitter</td>
</tr>
<tr>
<td>BT004</td>
<td>Locator not paired with Android/PC/PDA</td>
</tr>
<tr>
<td>BT005</td>
<td>Paired but connection attempt failed. Power cycling may be required</td>
</tr>
<tr>
<td>BT006</td>
<td>Corrupt response received from transmitter</td>
</tr>
<tr>
<td>BT007</td>
<td>Indeterminate response received from transmitter</td>
</tr>
<tr>
<td>BT008</td>
<td>No response received from transmitter</td>
</tr>
<tr>
<td>TX?</td>
<td>Transmitter unable to change to the requested frequency</td>
</tr>
</tbody>
</table>

Taking Survey Measurements

RD7100 locator models are capable of sending survey measurements to an external device using Bluetooth.

Saving measurements

To save survey measurements, press the key.

To achieve accurate results the locator must be kept as still as possible during the saving process.

If your paired device is out of reach the locator will display an error code. To avoid these errors disable the Bluetooth survey measurements transmission or ensure that your paired device is within range and correctly paired.

To send stored data to a paired device:

Stored data can be transferred wirelessly to a compatible Android device, running RD Manager for Android, a PDA running Radiodetection’s SurveyCERT app or a PDA or PC compatible application.

RD Manager for Android

RD Manager for Android is the official app from Radiodetection which makes utility mapping easier for surveyors in the field.

You can use RD Manager to store survey measurements taken from your locator, create utilities map and share Google Maps® map files via email.*

*Requires availability of mobile data.

RD Manager is available to download from Google’s Play Store. Its operation manual is also available as a free download from the Radiodetection website.

SurveyCERT

SurveyCERT is the PDA app from Radiodetection which makes utility mapping easier for surveyors in the field.

You can use SurveyCERT to store survey measurements taken from your locator in your PDA for later review. SurveyCERT for PDAs, and its operation manual are available as a free download from the Radiodetection website.

To send data to a paired device:

1. Ensure your paired device is switched on and running a compatible app.
2. Press the key to enter the menu.
3. Scroll to the LOG menu using the or keys.
4. Press the key to enter the LOG menu.
5. Scroll up or down to the SEND option.
6. Press the key and the locator will attempt to send your stored survey data to your paired device.

Stored data can also be transferred using the USB connection to RD Manager to be analyzed by the software’s built-in Survey Measurements capabilities. Refer to the RD Manager operation manual for more info on how to retrieve store survey data.

RD Manager’s Survey Measurements functionality can be used for post survey analysis, interface to Google Maps® and easy export to GIS/mapping systems.

Automatic Usage-Logging

RD71000 logging models (PLM and TLM) offer a powerful data logging system which records all the instrument’s critical parameters and warnings in its internal memory at the rate of 1/sec.

The automatic logging system is always active and cannot be disabled. The locator’s memory is capable of storing over 500 days of usage data, when used for 8 hours per day. Logs can be retrieved using the RD Manager PC application for usage analysis and survey validation. Refer to the RD Manager operation manual for further information.
CALSafe

CALSafe enabled RD7100 (PLM and TLM models only) are equipped with a system which does not permit them to function once they are beyond the expected service/calibration date.

When the unit is within 30 days of the service due date the unit will display at startup the number of days left. The locator will stop functioning on the service due date.

CALSafe is disabled by default. You can enable the CALSafe feature and edit the CALSafe service/calibration due date using the RD Manager PC software. Refer to the RD Manager operation manual for further information.

Training

Radiodetection provides training services for most Radiodetection products. Our qualified instructors will train equipment operators or other personnel at your preferred location or at Radiodetection headquarters. For more information go to www.radiodetection.com or contact your local Radiodetection representative.

Care and maintenance

The RD7100 locator and transmitter are robust, durable and weatherproof. However you can extend your equipment’s life by following these care and maintenance guidelines.

General

Store the equipment in a clean and dry environment.
Ensure all terminals and connection sockets are clean, free of debris and corrosion and are undamaged.
Do not use this equipment when damaged or faulty.

Batteries and power supply

Only use the rechargeable battery packs, chargers and power supplies approved by Radiodetection.

If not using rechargeable packs, use good quality Alkaline or NiMH batteries only.

Batteries should be disposed of in accordance with your company’s work practice, and / or any relevant laws or guidelines in your country.

Cleaning

WARNING! Do not attempt to clean this equipment when it is powered or connected to any power source, including batteries, adapters and live cables.

Ensure the equipment is clean and dry whenever possible.

Clean with a soft, moistened cloth. Do not use abrasive materials or chemicals as they may damage the casing, including the reflective labels. Do not use high pressure jets of water to clean the equipment.

If using this equipment in foul water systems or other areas where biological hazards may be present, use an appropriate disinfectant.

Software upgrades

From time to time, Radiodetection may release software upgrades to enhance features and improve performance of the RD7100 locator or transmitter. Software upgrades are free of charge and provided through the RD Manager PC software.

E-mail alerts and notification of new software releases are sent to all registered users. You can also check if your products are up-to-date or upgrade them by using the RD Manager software upgrade screen.

NOTE: To upgrade your product's software you need to have created an account using RD Manager and have a live internet connection. An optional Radiodetection power supply may be required to update your transmitter software.

Disassembly

Do not attempt to disassemble this equipment under any circumstances. The locator and transmitter contain no user serviceable parts.

Unauthorized disassembly will void the manufacturer’s warranty, and may damage the equipment or reduce its performance.

Service and maintenance

Regularly check your equipment for correct operation by using the Self-Test function and eCert.

The locator and transmitter are designed so that they do not require regular recalibration. However, as with all safety equipment, it is recommended that they are serviced and calibrated at least once a year either at Radiodetection or an approved repair center.

NOTE: Service by non-approved service centers may void the manufacturer’s warranty.

Details of Radiodetection offices and distribution partners can be found at www.radiodetection.com.

Radiodetection products, including this guide, are under continuous development and are subject to change without notice. Go to www.radiodetection.com or contact your local Radiodetection representative for the latest information regarding the RD7100 locator or any Radiodetection product.
